VAIBHAVI S. AGALE

Pune, India | vaibhaviagale7799@gmail.com | +91 9923109374 | linkedin.com/in/vaibhavi-agale-2546092b8 | github.com/vaibhavi-0320

EDUCATION

Savitribai Phule Pune University Expected Graduation, April 2028
Bachelor's Degree in Blockchain Technology, Pune, India

SKILLS

Programming Languages: Solidity, Rust, TypeScript, JavaScript, Python, HTML/CSS

Blockchain & Web3: Smart Contract Development, Soroban, Compact (Midnight Network ZK), Ethereum, Stellar, MetaMask, Freighter Wallet, IPFS/Pinata, OpenZeppelin, Hardhat, Remix

Frameworks, Cloud & Databases: React, Next.js, Tailwind CSS, shadcn/ui, Vite, AWS, MongoDB, Supabase, Vercel

Security & Protocols: AES-256 Encryption, SHA-256 Hashing, Zero-Knowledge Proofs, REST API Design, CI/CD

Languages: English, Hindi, Marathi

EXPERIENCE

Operations and Data Analytics Intern, Cubicl (On-site) Present

- Manage client relationships and day-to-day communication, keeping accounts on track and requests resolved
- Analyze sales data to track performance, spot trends, and support business decisions
- Support business management and daily operations, working directly with the team in a live business setting
- Build practical, hands-on experience applying data analytics to real operational and client-facing work

Blockchain Developer / Builder, Rise In, Stellar Journey to Mastery (Remote) 2026

- Built production-grade dApps on Stellar/Soroban as part of the program
- Developed and deployed StellarFund, a decentralized freelance escrow dApp with a Rust-based Soroban smart contract, 9 unit tests, and a CI/CD pipeline

Blockchain Developer, Midnight Network, New Moon to Full Moon (Remote) 2026

- Built ProofVeil, a confidential credentials dApp, writing Compact smart contracts with zero-knowledge circuits and testing them on the Midnight Preprod network
- Integrated the Lace wallet dApp connector and a local Docker proof server for in-browser proof generation

PROJECTS

SmartShelf: Decentralized NFT Book Marketplace Jan 2025 - Mar 2025
Founder / Solo Developer

- Built a decentralized library platform letting authors publish books as ERC-721 NFTs with automated on-chain royalty payouts on resale
- Deployed the BookNFT Solidity contract (OpenZeppelin ERC721, ERC721URIStorage, Ownable) to Sepolia; built with React, TypeScript, Vite, Tailwind, and Supabase

Fintrix: AI-Powered Invoice Financing Platform 2025 - 2026
Founder / Solo Developer

- Designed an AI-powered invoice financing platform on Stellar/Soroban combining escrow, gamification, and automated invoice parsing
- Caught a critical fund-routing vulnerability during a pre-launch security review and shelved the project rather than ship it, applying the findings to later escrow designs

ProofVeil: Confidential Credentials Platform on Midnight 2026
Founder / Solo Developer

- Built a zero-knowledge credentials dApp on Midnight Network with Compact circuits for credential submission, verification, and selective disclosure, so a claim can be proven without revealing the underlying data
- Built the React, TypeScript, and Vite frontend with Lace wallet integration, deployed on Vercel with Vitest tests and GitHub Actions CI

ACTIVITIES

Aptos Hackathon September 2025

- Built and submitted a blockchain-based project on the Aptos network within a competitive hackathon timeframe

Samsung Innovation Campus, AI/ML Course 2025

- Completed structured coursework in AI/ML fundamentals and applied it to real-world problem-solving exercises

Certifications: Full-Stack Web Development Bootcamp (Udemy), Google AI/ML Certification
